

General Well-Being

Hawaii County Residents Report Higher Rate of Fair to Poor Health

The general well-being measure from the Behavioral Risk Factor Surveillance Surveys shows that a higher percent of people in Hawaii County reported that their health was **fair to poor** compared to the state, **Figure 70**.

Figure 70

Hawaii County Residents Report Slightly Lower Rate of Very Good to Excellent Health

Hawaii County residents reported that their health was **excellent to very good** at rates just slightly lower than the state rates.

However, only about 50% of both the county and state reported **very good** to excellent health, **Figure 71**.
